## FERODO Off-Road Race Compounds:

- **SinterGrip SG Plus**

This is the new full-metal compound that is becoming the world leader in sintered off-road technology. The HH-Rated sintered compound is ideal in dry or wet conditions.

- Developed in world championship level competition
- Excellent performance and stability at low temperature
- Designed to disperse abrasive particles in extreme/muddy conditions
- Extended pad life, 3 x compared with organic
- Fast bedding-in period

- **Platinum Organic**

An organic compound for high performance off-road use (for **DRY CONDITIONS** only). Uses the technology gained from Ferodo's world racing programme. The material has been developed using the unique Ferodo vulcanisation process to give superior and consistent braking torque whilst ensuring a longer pad life. Ideal choice for those looking to reduce fluid boil.

**Key features of the Platinum organic are:**

- 2 x the pad life of comparable organic materials
- 20% less disc wear than competitive sintered compounds
- Low disc deposition
- Relatively high friction coefficient
- Lower operating temperatures than sintered metal pads
- Consistent performance throughout the life of the pad (not for use in muddy conditions)

## SUPERFORMULA - RACING BRAKE FLUID

FERODO Super Formula exceeds the performance of traditional brake fluids:

- Typical Dry Boiling Point 330° C. - higher than any other product on the market. (626° F)
- Excellent compressibility - far lower than silicone based products. Outstanding lubricity for smooth and efficient operation.
- Excellent viscosity index allows efficient operation at both high and low temperatures whilst remaining easy to bleed - unlike "high viscosity" competitor products.
- Fully meets the DOT 4 Specification – which is not the case with all products on the market. This allows the fluid to be used for races run on public roads.
- Last but definitely not least, the Ferodo brand and all that that implies about a product!

FSF050; Super Race Brake Fluid, 500ml, \$39.95 list
